

LEDGES OF GOLD

Ore Assaying Thousands of Dollars to the Ton in Gold. The McKinley Gold Mines Property now Proven and Demonstrated. Five Great Parallel Veins, Varying from Twenty to Fifty Feet in Width, Crossing the McKinley Claims.

SPLENDID FUTURE FOR THIS MINE NOW ASSURED BY THE FOLLOWING PROVEN FACTS:

FACT No. 1
The property of the McKinley Gold Mines Co. has been thoroughly proven up during eight years of development.

FACT No. 2
Hundreds of assays from these great ledges show values of from \$4 to \$2,000 to the ton in Gold.

FACT No. 3
The McKinley Gold Mines Co. owns this splendid gold property outright, free and clear from debt.

FACT No. 4
Test of \$8½ tons, recently made, yielded over \$600 in free Gold, with tailings assaying over \$15 to the ton.

FACT No. 5
The character, integrity and experience of the Company's management are open to the closest investigation.

FACT No. 6
Natural advantages—mineral values, timber, fuel, water, transportation facilities—all foreshadow UNQUALIFIED SUCCESS.

Gold by the Millions of Dollars—This is the record of Southern Idaho and the Great Boise Gold Basin during a few years' time. Hundreds of enterprising stockholders are growing wealthy from Idaho Gold Dividends—the figures prove it. This is Your Opportunity to Secure a Share in this Harvest of Gold. Buy McKinley Gold Stock Now at 5 Cents a Share.

Splendid Values in Gold

The Life Story of Robert McKinley, Prospector and His Determination to Make a Gold Mine.

The price of achievement in mining, as in other lines, is toil and hardship. This has been the experience of all successful prospectors, and the life story of Robert McKinley, of Boise, Idaho, furnishes no exception to the rule. But to-day, after more than eight years of patient toil and determination, he sees the reward almost within his grasp, and looks to the investing public to join him in a final effort to bring the crown of achievement to his untiring foresight and industry.

Robert McKinley was not unprepared for his work. He did not spend his boyhood days in idleness or luxury, but learned early in the school of practical experience the necessity of toil and the meaning of hardship. Born in Maryland in 1870, of sturdy Scotch-Irish lineage, he began his journey westward in early boyhood, and long before reaching the age of twenty he had mastered all the elements of the trade of the practical mechanic. Thoroughly equipped as a machinist and engineer, he sought the mining camps of Missouri and Arkansas, spending several years in familiarizing himself with the work of the mines.

It was about this time that stories of the fabulous mineral wealth of the great Northwest began to circulate, and rumors of rich and splendid gold strikes in Colorado, Idaho and Montana did not fail to impress the imagination of every ambitious mining man. It was in 1891 that placer mining for Gold began to be developed in Idaho, yielding fortune upon fortune to the pioneer gold-seekers of those wild regions. These same placers have yielded over \$100,000,000 during a period of twenty-five years, and are still producing.

It was Idaho that most appealed to the ambition of McKinley, as the region containing the greatest and most promising extent of unexplored mineral lands in the United States. The young prospector lost no time in starting out upon his search for a property of genuine merit, at the same time devoting his entire time and attention to the study of the mining industry. Of all the mineral sections that he visited throughout this vast region he found none richer or more promising than the now famous Boise Basin in Southern Idaho. He followed the trail from both Grimes and Moore Creeks which wash the sides of Jupiter Mountain, and traced the dykes and great surface outcroppings of mineralized ledges far up the slopes of the lonely mountain.

All this was the work not of a few weeks, but of long months of patient toil. After satisfying himself that the mineral values of the Jupiter Mountain ledges were beyond all question, after digging deep into the rich surface outcrops, cutting tunnels and taking out and testing the Gold in ton lots, Robert McKinley is now in a position to come forward with a clear conscience and invite the investing public to share with him in the magnificent profits which now await upon the complete and adequate development of this great property. He furnishes the land, and he looks to the public to supply the necessary money. In this partnership all will share alike; and the smallest investor will receive profits in the same proportion as the holder of 10,000 shares.

The practical experience and patient endeavor of Robert McKinley during his eight long years of search and toil furnish the fullest assurance that every dollar invested in this enterprise will be used in a way to produce the largest and quickest returns for the stockholders of this Company.

Convincing Statements

From Those Who Know Us and Our Property

Mr. W. M. Wells, Secretary Wells Corning Co., Kansas City, Mo., says: "On two different occasions I have made a thorough and complete examination of these great gold-bearing properties. The five great parallel veins traversing these groups have outcroppings of such a nature as few mining men have ever seen. I have personal knowledge of assays that have been made from these ore that run into thousands of dollars per ton. I am personally and intimately acquainted with your superintendent, Robert McKinley. He is a man of unquestioned integrity and reputation, and of splendid ability. He will, in my opinion, develop one of the greatest gold mines of the present day on your property."

Mr. John Ehnis, Vice-President Boise State Bank, Boise, Idaho, says: "I take no hesitancy in recommending Mr. McKinley as being a man worthy of the confidence of other business men. I have always found him to be perfectly reliable and trustworthy in his dealings."

Mr. A. E. Carlson, of the Carlson-Lusk Hardware Co., Boise, Idaho, says: "We have known Mr. Robert McKinley to any one for his business integrity and for his ability as a prospector and as a thorough mechanic. This Company invites the most searching investigation, knowing that its backing and its methods are unassailable and above reproach. Every possible facility for such investigation will be cheerfully furnished upon request."

JUPITER MOUNTAIN AND BOISE BASIN—RICHEST GOLD BEARING SECTION OF IDAHO

The McKinley Gold Mines property comprises 22 claims, or about 440 acres, situated on Jupiter Mountain, in Boise county, Idaho. The gold production of the famous Boise Basin has already amounted to the magnificent total of \$1,000,000,000 from the placers alone; and only quite recently have the immense mineral resources of the underground deposits begun to be developed to a stage of profitable production. The basin begins at the head of Moore's creek, and is now attracting wide attention from enterprising investors, who, following the trail of the prospectors, are now rapidly opening up and developing the district and laying the foundations for larger production and more lucrative profits than any hitherto realized.

The five great gold-bearing veins traversing the McKinley property trend from northwest to southeast, with off-shoots, branches and connecting fissures of enormous width plainly traceable by outcroppings. These veins are heavily mineralized in now an accepted fact among all mining men familiar with the district. A single tunnel can be run through all these veins at right angles, tapping them at depth, and draining the whole property.

Transportation facilities for the basin are now being rapidly developed by the Barber Lumber Co., which is constructing a branch road connecting with the Oregon Short Line branch at their plant at Barber, and running through Moore Creek Gulch, along the base of Jupiter Mountain. This railroad will pass within about half a mile of the McKinley property. The present stage road to Boise runs within 2,000 feet of our tunnel site. Light and power will be supplied to the section at an early date by the Wharton Power Plant, whose dam, just completed on the South Payette river, develops 2,000-horse power at the low-water stage.

A MOUNTAIN OF GOLD

Hundreds of Assays Proving the Extraordinary Richness of the Jupiter Mountain Formation.

The Gold now being obtained on the McKinley property is taken chiefly from volcanic or eruptive formations called "dykes." These dykes show a rich mineralization to the enormous depth of 2,000 feet. They are in fact, the source, the fountain head, of the golden stream which years ago began to enrich the placer miners in the beds of the creeks that wash the base of the mountain. As depth is attained these great dykes, enclosed between walls of solid granite, show amazing and almost unlimited quantities of rich gold-bearing ores, which years of working could not possibly exhaust.

The values obtained from these dykes are indicated in the following assays:

J. H. MORELAND, MINING ENGINEER.					
Certificate of Assay for McKinley Gold Mines Co.					
Sample No.	Gold	Silver	Copper	Value	
1.....	17.55	2.6	2.4	\$372.33	
2.....	2.3	2.2	37.50		
3.....	.06	6.4	7.8	46.60	
4.....	7.90	3.7	trace	100.60	

Mr. Moreland is Official Government Assayer for the United States custom house at Kansas City—the principal Federal assay office in the West—and the figures given are reliable and unquestionable. In addition to the assays here presented, hundreds of others have been obtained of the Jupiter Mountain ore showing values running all the way from \$4 to \$2,000 to the ton in Gold. These assays were made by such well-known assayers as Regis Chauvenet & Bro., of St. Louis; The Phillips Ore Testing and Metallurgical Works, of Denver; Jas. A. Pack, of Boise, Idaho; "Hick" Gold and Silver Extraction Co., of Fort Wayne, Ind.; and the American Smelting and Refining Co., of Salt Lake City. In fact, the mass of evidence now on file as to the quality of these ores is simply overwhelming and indisputable.

The Making of a Gold Mine

What is Required in a Successful Mining Enterprise

The world's wealth is taken from the ground, where it has been stored for long ages in Nature's treasure vaults. The work of obtaining these rich values from beneath the surface is not a speculation; modern science has given it a degree of certainty unequalled in any form of enterprise, and when the investor once understands the requirements of a successful mining enterprise, he can no longer look upon mining as a "venture" or a "gamble."

The conditions of success are three—the Mine, the Men and the Money. With a richly mineralized land of proven value—with an upright and experienced management determined to "make good"—and with the funds necessary to purchase machinery and equipment and carry forward the work of digging out the ores—the conditions are all present for a great and notable success.

By careful inquiry any investor may satisfy himself regarding the merits of a given proposition; and there is no excuse whatever for "taking chances" in mining any more than in any other legitimate business.

INVESTIGATE, INVESTIGATE—that is the secret of successful investment. The more carefully you investigate the MCKINLEY GOLD MINES COMPANY, the more anxious you will be to secure a block of McKinley stock at the ground-floor price; for we have the Mine, the Men and the Money, and for the possibility of larger and quicker results by the immediate expenditure of additional funds brings this offer before you at this time.

OFFICERS AND DIRECTORS

Unquestioned Standing and Integrity of the McKinley Management.

A careful investigation of the standing of our officers and directors will convince the most conservative investor that money placed in this enterprise is in safe hands. All such investigation will be welcomed, for these men have nothing to conceal.

Officers.
H. C. LINDSLEY, President; Railroad Contractor, Kansas City, Mo.
W. A. FORSTER, M. D., Vice-President; Physician, Kansas City, Mo.
N. EDWARDS, JR., Secretary and Treasurer; Manager of C. Smith Typewriter Co., Kansas City.
JEAN ROBT. MOEHEL, Ph. D., Consulting Engineer; Mining Expert and Assayer, Kansas City.
ROBERT MCKINLEY, Superintendent of Mines; Mining Engineer, Boise, Idaho.

Directors.
August Stuhl, Manufacturer; S. Kaufman, Clothier; Philip McKinley, of McKinley Plumbing Co.; B. B. Ralph, M. D., Physician; C. A. Rennacker, Merchant; Geo. W. Corder, Dental Surgeon (all of Kansas City).

These men are investing liberally of their own means in the present enterprise, but they realize that money is required to make a mine, and that with adequate funds—more than they can advance among themselves—the resulting profits will be far greater and quicker than if they should attempt to exclude the public from a share in the rewards of their efforts. No officer or director of the Company with the exception of the Mine Superintendent will receive any salary whatever until the dividend-paying stage is reached and dividends are actually declared. All monies derived from the sale of stock over and above the necessary expenses of advertising, etc., are to be used strictly for development purposes, and no extravagance or leakages of any sort will be countenanced.

Millions of Dollars in Gold

Extracts From the Reports of Robert N. Bell, Idaho State Inspector of Mines.

Idaho has a number of ore bodies that have enriched the commerce of the world with precious and useful metals to the value of millions of dollars, whose highest crests were hundreds of feet under the surface of the ground in the respective veins where they were found, often showing little more evidence of their existence than an iron-stained fracture, containing absolutely no commercial ore at the surface, and in some instances requiring years of hard work and apparent blind faith on the part of their discoverers in finding them.

The Boise Basin section, situated at the head of Moore's Creek, has received marked attention from investors during the past year; still, some very flattering opportunities remain.

The enormous output of placer gold from this basin was mostly derived from an area of about fifteen miles from north to south by a maximum width of thirteen miles from east to west, which, in comparison to its size, probably equals the output of any placer field in the world.

The area above described embraces not only Idaho City, but also the towns of Placerville, Quartzburg and Centerville, all of which have been rebuilt in recent years and present a neat and thriving appearance.

Quartz mining in this Basin is still in its infancy, and yet the basin has a quartz mining history which is unique, and holds out most encouraging indications for future success.

It is a notable fact that all the richest placer gulches of the Basin have led up to rich gold-bearing quartz veins and that there has been no question but that the erosion of these veins was the source of the placer gold; and as the outcrop of the numerous rich ore-bearing fissures show a vertical range of fully two thousand feet at the present day, it is conclusive that the chief sources of the placer gold was not exhausted by erosion.

There are dozen of handsome ledges among the ore-bearing beds of the Basin now awaiting the advent of capital that afford encouraging evidence of opening out into wood mines at depth if systematically and intelligently developed.

Eight Years of Gold Digging

A Statement From Our Mine Superintendent.

For eight years I have studied Jupiter Mountain in the Boise Basin, following the Golden trail from both Grimes and Moore Creeks, which wash its base, up the steep sides to the eruptive dykes that prominently crop on its surface.

I have made a close study of these dykes and traced them along their course; I have dug holes into them, and have found them to be a tunnel to a depth of two hundred feet; found the gold ore and have taken it out and tested it in ton lots. I have had hundreds of assays made and I know the nature and quantity of the ore and how most economically to treat it.

After all these years of preliminary work and the expenditure of thousands of dollars, I am convinced that with the proposed plan of development outlined herein we will have one of the richest properties on the Pacific Slope.

Robert McKinley

First Allotment of Stock at 5c Per Share—Par Value, \$1.00 Price Will Advance in a Few Days

This enterprise is to be a partnership between Robert McKinley, Prospector, and the investing public, especially the man of limited means desirous of a square deal and an opportunity to share in the lucrative profits of a legitimate mining enterprise. Development has already thoroughly proven up our property and demonstrated beyond all question that the most extensive operations are fully warranted to obtain quick and large results. The tunnel to be constructed

is certain to cross-cut the gold ledges; and when the ores begin to be removed in quantities by this tunnel the opportunity to join with us in this enterprise will no longer be open. To-day this stock can be bought for 5 cents per share. The price will be rapidly advanced with each step in the progress of development; and those who join us now will quickly see their money doubling and trebling with the advances in this security. The present opportunity will be held open for a short time only, and prompt action only will insure against disappointment in securing this stock.

One of Robert McKinley's Prospect Tunnels.

(From Photograph.)

The tunnel is six feet in height, and is run in 100 feet. It was constructed by Mr. McKinley with the purpose of tapping one of the great ore-bearing ledges and ascertaining actual values. The ledge was cut at a depth of 50 or 60 feet, and values were proven assaying in many cases hundreds and thousands of dollars to the ton in Gold. Other short tunnels, open cuts and shafts on the McKinley property have shown equally good values.

What We Propose to Do

The Experimental Stage is Passed—Rapid Development Now to be Our Watchword.

No money was ever made without the investment of money. The McKinley Gold Mines Company proposes to secure at once the needed machinery and equipment through the construction of the tunnel which is to cross-cut the five great ore-bearing ledges at depth. The economy of tunnel mining over shaft mining is too well known to require comment. The most modern and scientific appliances will be used—costs will be kept down to the lowest figure—the work will be done thoroughly. This great tunnel will determine the character of the ore at a depth of 1,000 feet. Our reduction plant will then be equipped—the gravity system of ore handling and drainage will be applied to our operations, and an adequate milling equipment will be installed.

The experimental stage is now passed, and the money spent in this enterprise will be devoted to preparing for enormous production at little cost. The net profit will then quickly exceed all the expenditures of the past, and stockholders in the McKinley Company will then realize the truth of the old adage that "As a man sows, so shall he reap."

The Time for Action is Now

Delay pays no dividends. Our illustrated prospectus, list of high-class business references, terms of subscription for stock, and full information, will be sent FREE upon request. WRITE TO-DAY.

OUR PLAN OF EASY PAYMENTS

No one is to be debarred from coming in with us at the bottom price by lack of ready money. Make your reservation now for as many shares as desired, send remittance of one-tenth the full amount, and pay the balance in nine monthly payments. You thus secure your whole reservation at the bottom price.

Stock Now Only 5c a Share—Par Value, \$1

\$1 down and \$1 monthly for 9 months buys	200 shares, par value \$ 200.
\$2 down and \$2 monthly for 9 months buys	400 shares, par value \$ 400.
\$3 down and \$3 monthly for 9 months buys	600 shares, par value \$ 600.
\$4 down and \$4 monthly for 9 months buys	800 shares, par value \$ 800.
\$5 down and \$5 monthly for 9 months buys	1,000 shares, par value \$ 1,000.
\$6 down and \$6 monthly for 9 months buys	1,200 shares, par value \$ 1,200.
\$7 down and \$7 monthly for 9 months buys	1,400 shares, par value \$ 1,400.
\$8 down and \$8 monthly for 9 months buys	1,600 shares, par value \$ 1,600.
\$9 down and \$9 monthly for 9 months buys	1,800 shares, par value \$ 1,800.
\$10 down and \$10 monthly for 9 months buys	2,000 shares, par value \$ 2,000.

No preferred stock, no bonds. All shares share alike. Stock fully paid and non-assessable. No forfeiture of payments—certificates issued at any time upon request for amount of stock paid for. All reservations made now at 5 cents per share will be secured at that price, regardless of future advances.

EVERY INVESTOR PERSONALLY GUARANTEED

To every investor in McKinley stock I make these unqualified guarantees: Send me your order at once with first remittance of 10 per cent, subject to withdrawal within 30 days if not fully satisfied with your investment. More than this, I will personally guarantee to sell the holdings of any investor at the end of one year desiring to dispose of his stock. I have investigated this enterprise inside out, and I believe that I know its value if any one does. McKinley Gold stock is going up, and for this reason I feel entirely safe in making these guarantees. As to my personal responsibility, I refer by special permission to the Bankers' Trust Co., Kansas City, Mo. The present allotment is likely to be largely over-subscribed, and the right is reserved to return any subscription or reduce the amount of the same. Prompt action in any case will be necessary.

Immediate acceptance of this offer is urgently advised; but prospectus and full information will be sent FREE to any investor wishing to make further inquiry before remitting. WRITE TO-DAY. Address all communications and make all remittances payable to

M. H. TOMLINSON, Financial Agent,
MCKINLEY GOLD MINES COMPANY
816 Century Building. KANSAS CITY, MISSOURI

VALUABLE OPTION SECURED

McKinley Stock Enhanced Many Points in Value by This Deal

Since entering into the contract as financial agent for the sale of this stock at 5 cents per share, I have received word from the Board of Directors that they have succeeded in putting through a deal which will add enormously to the assets of the Company, and would justify them in increasing the price at once to far above the present figure.

This deal is in the form of an option secured upon five claims, or about 100 acres, of the Great Divide Mining Company adjoining the McKinley property upon the west. This is a heavily mineralized property which has been thoroughly proven up and has yielded tests and assays showing hundreds and thousands of dollars to the ton in Gold.

As I had already secured the contract for the sale of stock previous to the securing of this option I am still able to offer it for a short time only at the original price of 5 cents per share, but I am advised that the price will have to be advanced at a very early date.

FREE INFORMATION COUPON—Clip and Mail To-Day

M. H. TOMLINSON,
